

Link two Honda EU2000i generators together with this Parallel Power Kit, and get twice the power!

Now you can connect two Honda lightweight, superquiet EU2000i generators to power larger loads such as RV water heaters and A/C units. This parallel kit offers an affordable, convenient power solution for operating appliances or lights while camping or during a power outage at home.

FEATURES:

- **Integrated Design** – Bolt-on, streamlined design provides convenient use in damp environments and easy storage.
- **Protection** – A 30 amp breaker provided for protection against generator overload.
- **Two Configurations** – For residential transfer switch or RV/camper applications.
- **Simple installation** – Clamp the kit onto the end of one of the EU2000i generators, connect the wires to both generators, and connect a generator power cord from the parallel power kit to a transfer switch or RV inlet.
- **Durable** – Resin frame ensures long life, and won't rust.
- **Warranty** – 24 months on parts and workmanship.

Available Configurations:

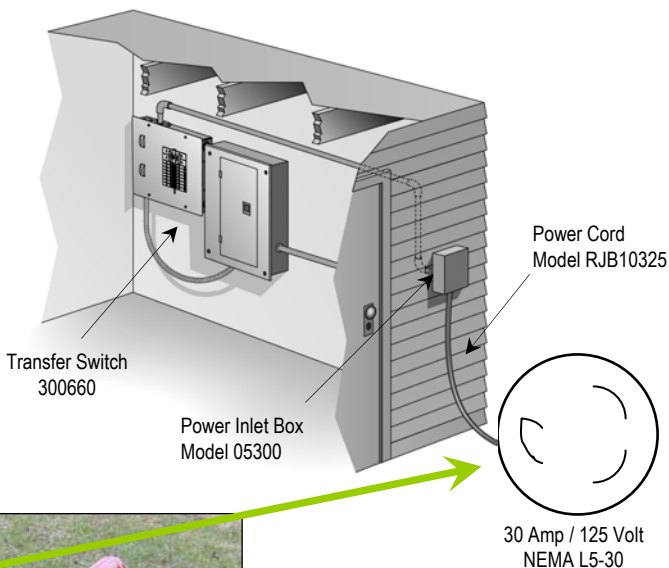

Model	30501-A	73131-A
Application	For connection to transfer switch to run household circuits during an outage	For connection to RV or camper to power appliances, lighting and an A/C unit (up to 11,000 BTU)
Amperage	30 amps @ 125V	30 amps @ 125V
Configuration of Female Outlet (on bottom of unit)	NEMA L5-30 30 Amp / 125V	NEMA TT-30R RV Receptacle 30 Amp / 125V

Link two generators to power your home during an outage...

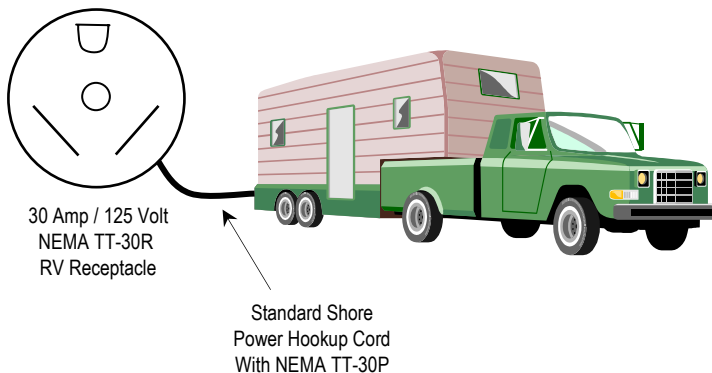

Model 30501-A

Model 73131-A

Or use it while you're on the road!

Safely power the AC unit or water heater on your RV or camper.

IMPORTANT: The accessories noted here are intended for 120 volt use only. Transfer switches and power inlet boxes should be installed by a qualified professional familiar with residential wiring and electrical codes. Gen/Tran accepts no responsibility for accidents caused by incorrect or in appropriate installation.

WARNING: Hazardous voltages present when generators running. Will cause death, serious injury or substantial property damage. Shut off generators before connecting to or disconnecting from Parallel kit.
