

***A rigid, durable shelter for a secure, lockable, weatherproof way to store and operate a portable generator for backup power.***

***Ideal for running a portable generator for home standby applications when connected to a transfer switch.***

## **FEATURES:**

- Provides secure, lockable, out-of-the-way protection of a portable generator from weather and theft during operation and storage.
- Frees up space in your garage or basement for other items.
- Includes all shed parts and an integrated floor, factory-installed ventilation louvers, a heavy duty blower fan designed to withstand the elements, a venturi exhaust system and a high temperature sensor switch.
- Connected to standard 120 volt receptacle on the generator, the internal blower fan introduces fresh air to the generator engine and only runs while the generator is operating.
- Exhaust fumes and heat exit the enclosure via our venturi exhaust attachment system. Additional heat is dissipated through the louvers mounted on the sides and back of the enclosure. A high temperature sensor switch is included to shut off generator in case of overheating.
- Accessing your generator for starting, refueling and servicing is a cinch by raising the roof and opening the doors.
- Installing your generator in the GenShed shelter may reduce engine noise by as much as 10 db, reducing noise pollution around your neighborhood.
- Accommodates portable generators **up to 7500 watts** continuous.
- Ideal for gasoline or diesel-powered generators as well as portable generators fueled by propane or natural gas.
- **Physical dimensions of portable generator must not exceed 28" wide x 40" long x 28" high. Assembled size of shelter is 55"W x 37"D x 39"H.**
- **Weight of generator (with full gas tank) shall not exceed 500 lbs.**

## **Model Description**

### **GS7500**

**GenShed™ generator shelter** for storing and running a portable generator up to 7500 watts. Includes integrated pad and structure for an easy assembly in minutes, a blower fan that brings in fresh air when the generator is running, and a unique venturi exhaust system that safely directs fumes and heat out of the enclosure. Secure, padlockable.

### **2602A-12**

**Automatic Battery Charger & Maintainer** – Float charger maintains battery without overcharging. 2 Amps. For 12 volt flooded or Gel Cell batteries. Waterproof. Use on boats, cars, lawn tractors, personal watercraft, ATVs, Motorcycles. Requires a dedicated cord to GenShed. Rated 150 amp hours.

**DISCLAIMER:** The GenShed™ shelter has been designed with safety in mind, and therefore all instructions for installation and use of this product should be strictly followed. Failure to follow the instructions may cause property damage and/or personal injury. This shelter should not be attached to a dwelling or installed in any space that is part of a dwelling. GenTran is not responsible for damage or injury caused by improper or inappropriate installation or use. Recommended lock should have 5/16" shaft. This shelter can be secured to the ground by drilling holes in the four corners on the inside of the shed and hammering 12" nails into the ground or bolting to a cement pad. GenTran is not responsible for theft.
